

# DATA AND EXPERIENCE DESIGN FOR EDUCATION

## Tying Investments to Outcomes

## Matching Community Needs

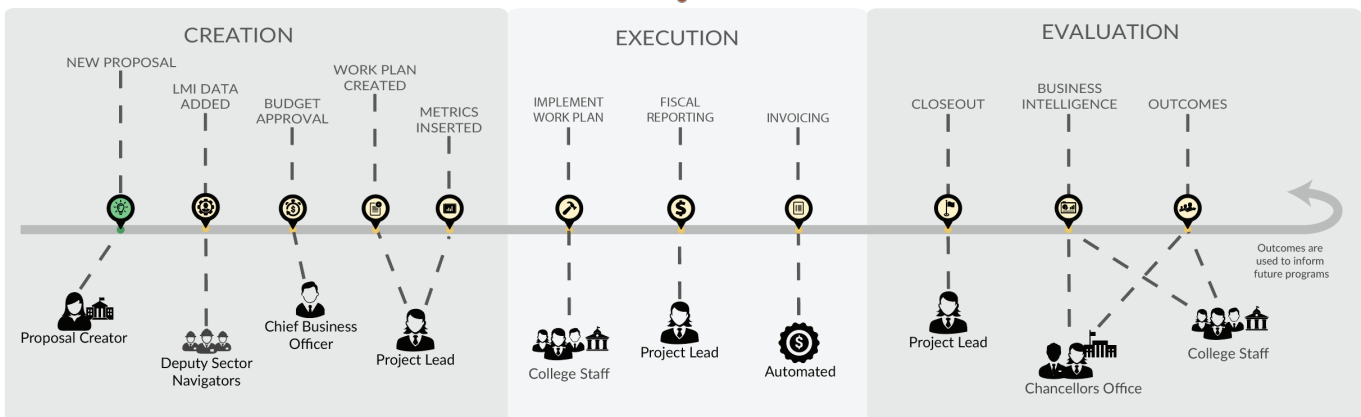

California allocates over \$2B annually to community college programs. The task of allocating these funds and tracking program success in an effort to maximize workforce enhancement is a daunting one. California Community Colleges(CCC) is the largest system of higher education in the nation with 2.1M students attending 115 colleges. In 2016 productOps began a partnership with the CCC Chancellor's Office to build a statewide system that would allow easy program proposal, program review, and fulfillment while offering real-time metrics to help gauge student success and match college programs to local community workforce needs.

## End-to-end Program Management

The productOps NOVA software platform is designed to increase student success rates through more efficient and relevant program creation, better fund management, and enhanced data management across the entire CCC system.

NOVA features:

- Fund Management - Collaborative online proposals
- Standardized Process - Efficient intuitive workflows
- Data Management - Labor market data, customizable metrics and real time reporting.
- Full ADA Compliance - Access and usability for anyone

NOVA End-to-End Workflow
